

MaxAir – Database Restore

MaxAir database backups are created in three different ways.

In the first case they are created automatically when database updates are applied by the update process, these archives are created as ZIP files, where the files names are of the format **'Full Path Name/maxair_mysql_2022-06-11_11-03-49.zip'**.

In the second case they are created by the Immediate Backup process and in the third case they are created by the Auto Backup process, in both instances the archives are created as GZ files, , where the files names are of the format **'Full Path Name/maxair_2022-06-11_11-03-49.gz'**.

In Database Archives can be restored from the System Maintenance/Restore DB menu.

Restore DB

Restore a Backup Created by the Backup Database Process (.gz file), or one Created by the Database Update Process (.zip file).

Available Backups are Shown in Date Order. Click to Select.
